

Project Report: NewsKnow

NewsKnow is a React JS application designed to provide users with the latest news updates. The application integrates various news APIs to deliver real-time news on various topics. This report covers the development process, technologies used, features, and future enhancements

Technologies Used:

Frontend: React JS, HTML, CSS, JavaScript

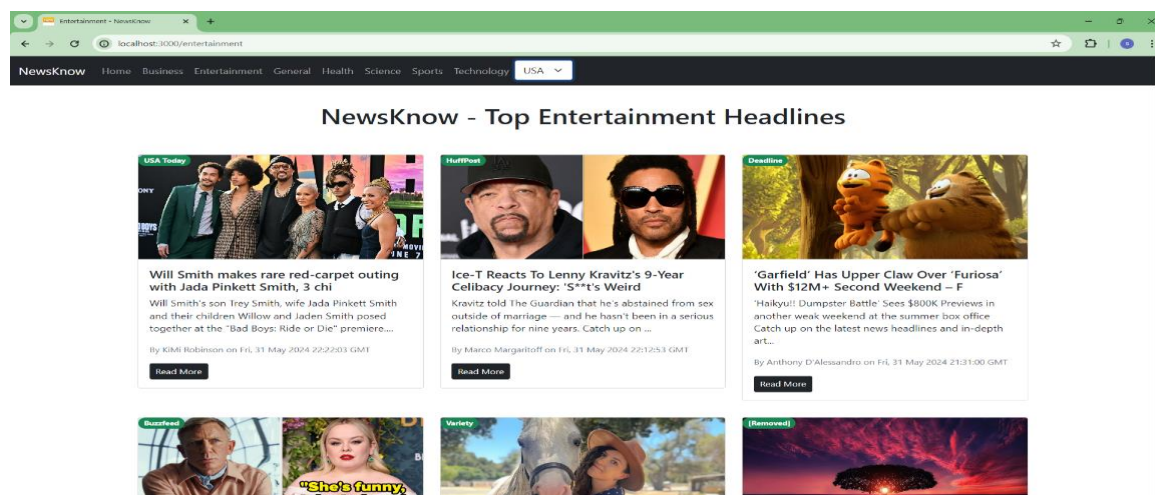

APIs: NewsAPI, other relevant news sources

Features:

Real-time News Updates: Users can view the latest news articles from various categories.

Category Filtering: Users can filter news by categories such as Technology, Sports, Business, etc. With two country's INDIA, USA.

Responsive Design: The application is designed to be responsive on mobile and desktop devices.

Conclusion:

The NewsKnow project successfully demonstrates the ability to develop a modern web application using React JS. The application meets the initial objectives of providing real-time news updates with a responsive and user-friendly interface. Future enhancements will further improve the functionality and user experience.
